First, you need to determine whether the battery firmware version supports the establishment of a closed-loop communication connection between the inverter and the battery model.

The master battery handles all external communication with the inverter, EMS, or host PC, while the slave batteries synchronize their operating states internally.

If the inverter and battery are having communication issues, there are a number of alarms that could occur. BAT_Comm-Fail, CAN_Comm-Fail, No-Battery, and Batt-ON-Fail are all ...

Discover why inverter battery communication protocols often fail in modern solar systems and how to prevent premature LFP battery degradation. This guide explores the critical control loop ...
