---

What is running through your neighborhood is a thick underground cable containing perhaps 25 or 50 pairs of copper wires. The little green box is a place where the 50-pair cable pops ...

Smaller green boxes often house telecommunications equipment, including junction points for cable television, high-speed internet, or traditional copper telephone lines. These ...

The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would ...

The coverage area in which service is provided is divided into a mosaic of small geographical areas called "cells", each served by a separate low power multichannel antenna at a base station.

Green telecommunications boxes come in distinct configurations based on installation location and service requirements. Here's a detailed look at the ...

During construction, crews will need to access areas where utility lines are located by way of utility easements. A utility easement grants utility companies such as water, sewer, electric ...

The present-day tele-space is incomplete without the base stations as these constitute an important part of the modern-day scheme of wireless ...

In professional two-way radio systems, a base station is used to maintain contact with a dispatch fleet of hand-held or mobile radios, and/or to activate one-way ...
