This webpage includes information from first responder and industry guidance as well as background information on battery energy storage systems ...

The hazards and controls described below are important in facilities that manufacture lithium-ion batteries, items that include installation of lithium-ion batteries, energy storage facilities, and facilities ...

Regulatory testing has shown that the products of combustion of lithium-ion batteries can include flammable and nonflammable gases. Based on this testing, the flammable gases are found to be ...

The guidance is specific to ESS with lithium-ion (Li-ion) batteries, but some elements may apply to other technologies also. Hazards addressed include fire, explosion, arc flash, shock, and toxic chemicals.

Homeowners increasingly adopt lithium-ion batteries for solar energy storage, backup power, and energy efficiency. These systems, when installed ...

As there is an abundance of noxious gases from lithium-ion battery fires, this is key to first evaluating an incident, as well as maintaining health and safety of those responding to the incident.

This document provides guidance to first responders for incidents involving energy storage systems (ESS). The guidance is specific to ESS with lithium-ion (Li-ion) batteries, but some elements may ...

Eligible for the "smaller" cells and batteries exceptions, provided they meet size, packaging, and hazard communication conditions in 173.185(c). Single inner packaging must be placed in performance ...

Contact site operator for assistance in accordance with the Emergency Response Plan (ERP). Confirm power
