An improved base station power system model is proposed in this paper, which takes into consideration the behavior of converters. And ...

To address this challenge, scholars have focused on developing sustainable 5G base stations.

To address the energy consumption issues of communication base stations, we have implemented a series of measures to transform traditional base stations into low-carbon ...

Research on low-carbon energy technologies for communication sites: in 2024, China Mobile advanced research on low-carbon energy technologies, updating and refining ...

Here we develop a large-scale data-driven framework to quantitatively assess the carbon emissions of 5G mobile networks in China, where over 60% of the global 5G base stations are ...

Here we develop a large-scale data-driven framework to quantitatively assess the carbon emissions of 5G mobile networks in China, where over 60% of the global 5G base ...

It is important for China's communications industry to reduce its reliance on grid-powered systems to lower base station energy costs and meet national carbon targets. This study examines ...

Abstract: With the maturity and large-scale deployment of 5G technology, the proportion of energy consumption of base stations in the smart grid is increasing, and there is an urgent need to ...

In this work, we investigate the feasibilities and challenges of energy-communication-transportation hub (ECT-Hub) design from a base-station-centric view and propose methods to ...
