This paper provides an extensive review of the status of the technical development of fast-charging infrastructure architectures and standards, and a classification of fast-charging methods.

To address these issues, this study proposed a novel approach: implementing DC fast charging stations for EVs powered by solar energy. The proposed system featured a step-up DC-DC ...

This paper addresses the challenge of high peak loads on local distribution networks caused by fast charging stations for electric vehicles along highways, particularly in remote areas with weak networks.

Find the nearest charging points, check availability, and contribute to a greener future. Explore our comprehensive network of electric vehicle chargers today.

Developing novel EV chargers is crucial for accelerating Electric Vehicle (EV) adoption, mitigating range anxiety, and fostering technological advancements that enhance charging efficiency ...

The Investment Board Nepal has initiated a greenfield project to establish 400 fast charging stations in densely populated areas and along highway service areas (Investment Board Nepal, 2024).

The Government of Nepal is initiating a project to establish 400 fast charging stations for electric vehicles across highways and densely populated areas, ...

Abstract: Fast-charging stations play a crucial role in the transition to electric vehicles, particularly those located along highways that are expected to replace conventional gas stations.

Using solar energy is viable in Nepal since the technology is already advanced and economically cheap. In this paper, a feasibility study is done about the techno-financial aspect of installing the solar PV ...

Fast charging of Nepalese solar-powered containers on highways

This study optimizes the placement and sizing of solar photovoltaic-battery system (PV-BESS) in Nepal's 30-bus Byasi feeder to mitigate these issues.
