Crankcase explosion relief valves have been approved according to IACS UR M66 Type Testing Procedure for Crankcase Explosion Relief Valves or MAN Diesel 1999 specifications. Oil mist ...

Generator exhaust systems for years have been fabricated from sections of schedule 40 carbon steel pipe that are field welded, then insulated to reduce surface temperatures.

Changes in direction of the vent piping and/or insufficient means for thermal expansion, and/or improper sizing creates excess pressure in the pipe, which may cause the pipe to break apart, ...

INSTRUCTIONS TO DIAGNOSE AND REPAIR GENERATOR SLIDE AIR LEAK Begin by following the steps below to find and correct the air leak in the generator air slide system.

This document provides a procedure for conducting an air ...

Because of a long equivalent length of the exhaust flue (about 40-50 FT and bends), the calculated pressure loss exceeds that suggested for the generator. One solution is ...

The computations used shall be technically sound, follow ASHRAE calculation methods and shall incorporate the specific flow characteristics of the inner pipe. The contractor shall furnish the ...

Exhaust piping must be terminated safely outside a structure that houses a generator, in such a way that hot gases and sparks will be discharged ...

I never seen so much asbestos floating in the air on the turbine floor. The exhaust fans were pulling it outside as much as they could, but it was still hard to see.

Several workers sustained minor injuries and millions of dollars" worth of equipment was damaged by an explosion after a shaft blew out of a check valve. The valve failure rapidly released a ...
