Though sunnier regions elsewhere have the potential to generate far more electricity, in Germany falling prices, improved technology and political ...

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale ...

Solar installations generated around 87 TWh of electricity in 2025. Of this, approximately 71 TWh was fed into the public grid and 16.9 TWh was self-consumed. Total production increased compared to ...

Germany installed 16.2 GW of solar in 2024, bringing total PV capacity to 99.3 GW by the end of December 2024, according to the Federal ...

Here, you can view at any time the total output of all PV plants in Germany installed up to the specified cutoff date. As required, you can view this information as an absolute value or as a ...

Germany installed 16.2GW of solar PV in 2025, according to an analysis by the Fraunhofer Institute for Solar Energy Systems (ISE) and based on the energy ...

OverviewHistoryGovernmental policiesStatisticsCompaniesSee alsoExternal linksDuring the Reagan administration in the United States, oil prices decreased and the US removed most of its policies that supported its solar industry. Government subsidies were higher in Germany (as well as Japan), which prompted the solar industry supply chain to begin moving from the US to those countries. Germany was one of the first countries to deploy grid-scale PV power. In 2004, Germany was the first country, together with Japan, to reach 1 GW of cumulative installed PV capacity. Since 2004 solar pow...

Germany gets less sun than the entire continental US, and yet almost a fifth of its electrical generation was done by solar power in 2025.

Germany installs solar power generation

Germany's current largest solar installation, located in Saxony, went into operation in spring 2024 with a capacity of 162 megawatts (MW). At the end of 2024, installed solar capacity in ...

Across the EU, photovoltaics surpassed coal-fired power generation for the first time in 2025. Wind power was the strongest net electricity producer ...
