Across the EU, photovoltaics surpassed coal-fired power generation for the first time in 2025. Wind power was the strongest net electricity producer ...

Solar farms are set for a record stretch of power sector dominance in Germany after becoming the single largest generation source in the country at ...

Solar installations generated around 87 TWh of electricity in 2025. Of this, approximately 71 TWh was fed into the public grid and 16.9 TWh was self-consumed. Total production increased compared to ...

Germany produced 18% of its electricity through solar power in 2025, up from 14% in 2024, a significant leap that meant solar overtook both coal and ...

Renewables are now making up a majority of the net public ...

OverviewGovernmental policiesHistoryStatisticsCompaniesSee alsoExternal linksGermany introduced its feed-in tariff in 2000 and it later became a model for solar industry policy support in other countries. As of 2012, the feed-in tariff costs about EUR14 billion (US\$18 billion) per year for wind and solar installations. The cost is spread across all rate-payers in a surcharge of 3.6 EURct (4.6 ¢) per kWh (approximately 15% of the total domestic cost of electricity). On t...

Germany has accelerated its renewables deployment, with solar growing at a record pace. Wind, though currently lagging, is expected to gain momentum in the future. From January to ...

Germany made a notable shift toward renewable energy sources last year, according to a report from the Federal Network Agency released on ...

Germany added almost 20 GW of new wind and solar power generation capacity, with total installed

Germany s solar power generation new energy

renewables capacity pegged at around 190 GW, regulator BNetzA said late Jan. 8.

Solar power's fast growth in recent years already has led to concerns over the electricity system's ability to absorb millions of new scattered power production facilities across the country, as ...
