Increasing solar power generation capacity

Solar power continues its run as the fastest-growing source of new generation. Developers plan to add 43.4 GW of utility-scale solar in 2026, a 60% increase over the record ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating ...

Solar, wind, and battery storage are projected to add 62% more generating capacity in 2026 than in 2025, assuring that...

Solar PV will account for around 80% of the global increase in renewable power capacity over the next five years - driven by low costs ...

The massive step up in solar capacity installations in 2023 and 2024 has shifted perceptions around solar"s role in the energy transition. Solar will likely add more GWs in 2024 ...

Developers are forecast to add a record 43.4GW of new utility-scale solar PV capacity to the US power system in 2026, according to the EIA.

Solar has now been the largest source of new generating capacity added each month for two years straight: September 2023 ...

In 2024, over 30,000 MW of solar capacity came online, which is a 30% increase in operating solar capacity. An additional 34,000 MW are under preparation, testing, or construction and ...

The US Energy Information Administration reports that developers in the United States plan to add about 86 gigawatts (GW) of new utility-scale electric generating capacity in ...
