Japan is steadily expanding its share of renewables in electricity production to reduce greenhouse gas emissions, be less dependent on fossil fuel imports, and decrease electricity costs.

This study investigates the future role of renewable energy in Japan as a case study. A 40-year hourly energy balance model is presented of a hypothetical 100% renewable Japanese ...

OverviewGovernment actionSolar manufacturing industrySee alsoExternal linksThe Japanese government is seeking to expand solar power by enacting subsidies and a feed-in tariff (FIT). In December 2008, the Ministry of Economy, Trade and Industry announced a goal of 70% of new homes having solar power installed, and would be spending \$145 million in the first quarter of 2009 to encourage home solar power. The government enacted a feed-in tariff in November 2009 that requires utilities to purchase excess solar power sent to the grid by homes and businesses and pay twice the st...

Tariff uncertainty remains a critical restraint for the Japan Concentrated Solar Power Market, as frequent policy revisions create cost volatility and planning challenges for businesses.

As the Japanese government begins the process of reviewing and updating its basic energy plan, calls are growing for ...

Solar PV accounted for 25% of Japan's total installed power generation capacity and 11% of total power generation in 2023.

It highlights supply diversification, domestic production, and recycling as ways to reduce import dependence, and notes that solar PV is Japan's most cost-competitive power source with ...
