Wind turbines harness energy from the wind using mechanical power to spin a generator and create electricity. Not only is wind an abundant and inexhaustible ...

Lazard has sought to address those concerns by adding a new calculation to its report that accounts for the cost of providing backup power to ...

Wind energy is cheaper than fossil fuels, drives innovation, and strengthens communities, yet U.S. political hurdles threaten its growth and ...

Shanghai has approved the Fengxian 1# offshore photovoltaic project, the first commercial-scale solar-wind hybrid of its kind in China. The ...

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the ...

Wind and solar depend on weather and daylight. They can't produce base-load power consistently and need fossil fuel or nuclear generated ...

Renewable technologies like wind and solar power are, in most cases, cheaper than the fossil fuels that are driving climate change, but the ...

Solar and wind energy have emerged as the dominant forces in the global renewable energy transition. Together, they account for nearly 90% of new power capacity additions worldwide.

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated ...

Let wind power replace electricity generation

In our January Short-Term Energy Outlook (STEO), we forecast that rising electricity generation from renewable energy resources such as solar and ...
