The generic microgrid architecture, energy management optimization models, and laboratory-scale experimental setup demonstrated in this thesis can promote further exploration of ...

In recent years, there have been movements to encourage the development of energy storage systems at a state and federal level, though little research has been done to discover how ...

In this thesis, research is carried out to examine the sustainability of rural microgrids and then develop metrics to enhance how sustainability can be measured for these types of projects.

This thesis design, model and control the DC microgrid components for power balance in standalone mode under varying solar irradiation, wind speed and changing loading conditions even for worst ...

The art of the optimisation methods in sizing and EMSs for microgrids. The work in this thesis is divided into three parts; the first part deals with sizing grid-connected PV-Battery Energy Storage System

This means that microgrids are conceptually very different to conventional distribution grids, because the latter have large centralized power plants instead of distributed energy resources [7].

Rather than conducting a cost-benefit analysis (CBA) to assess the overall feasibility of microgrids, this research uses TCT to examine the specific costs incurred in the transactions required to develop and ...

Through this research, the methodology of dealing with systems consisting of subsystem properties bigger capacity of output. In a microgrid, the capital cost of per kW output power of internal ...

The included work in this thesis has been carried out by the author at the Department of Electrical Power and Machines, Ain Shams University. No part of this thesis has been submitted for a degree or a ...

Microgrid Research Undergraduate Thesis

The thesis focuses on integrated energy management strategies for microgrid systems, and constructs an off-grid energy system that includes photovoltaic, wind, heat pump, boiler and energy storage.
