In order to accurately describe the impact of the volatility and randomness of renewable energy output power on the operation of industrial ...

This paper proposes a closed-loop technical framework combining high-confidence interval prediction, second-order cone convex relaxation, and robust optimization to facilitate ...

To meet these challenges, a robust optimization method incorporating piecewise linear thermal and electrical efficiency curve is proposed to accommodate the uncertainties of cooling, thermal and ...

This paper studies the problem of robust optimization of grid-connected microgrids, without considering the optimization model in the case of microgrid islands and multiple microgrids.

In this paper, single and multi-objective robust optimization of a microgrid (MG) including photovoltaic (PV) and wind turbine (WT) sources with battery storage has been performed in a radial...

This study proposed a robust optimization method incorporating piecewise linear curve to mitigate the electrical load and RES output uncertainty to determine the day-ahead cost.

To address this, we proposed a robust mixed-integer linear programming model for the microgrid to minimize the day-ahead cost. To validate the proposed model piecewise linear curve is ...

A three-stage adaptive robust optimization model for microgrids operation, considering the uncertainties of PV and WT generation, consumer demand, and price of electric power, was ...

erves as a promising solution to in-tegrate and manage distributed renewable energy resources. In this paper, we establish a stochastic multi-objective sizing optimization (SMOSO) model for microgrid ...

A robust optimization based method is proposed to reduce voltage harmonic distortion in islanded microgrids,

Microgrid Robust Optimization Method

which reduces the search time significantly compared to the traditional optimization ...
