Power dispatch in microgrids refers to the process of managing and distributing power generated by DERs within a microgrid. This can be a challenging task due to factors such as the ...

This study presents a comprehensive analysis of economic dispatch and optimal power flow in microgrid systems, address-ing both single-bus and three-bus grid-tied configurations.

This paper proposes a comprehensive energy dispatch optimization framework for electricity-thermal-hydrogen airport microgrid that explicitly incorporates aviation energy demands of ...

Based on the assumption that the microgrid adopts the grid-connected mode, this study proposes a bi-level robust optimization framework for interconnected system coordination to address ...

This letter describes an enhanced multi-period dispatch model for microgrids, in which frequency-aware islanding constraints are established to ensure microgrids with the capability to ride ...

To minimize the environmental and total operating costs of the micro-grid intelligent scheduling system during grid connection, this study proposes a micro-grid intelligent scheduling ...

Within this study, we consider a microgrid design and dispatch model that can measure resilience while considering the uncertain ef-fects of population growth and electrification, climate ...

Finally, a microgrid group composed of four microgrids is used as an example for simulation verification. The simulation results show that the distributed economic model predictive ...

In this paper, we propose a distributed economic dispatch algorithm for MGs providing frequency regulation service, as an example of a dispatch profile with ramp commands.

This work developed a simulation environment and tertiary controls approach for microgrid economic

Microgrid internal dispatch

dispatch and resilience dispatch for grid ...
