A base transceiver station (BTS) or a baseband unit (BBU) is a piece of equipment that facilitates wireless communication between user equipment (UE) and a network. UEs are devices like mobile phones (handsets), WLL phones, computers with wireless Internet connectivity, or antennas mounted on buildings or telecommunication towers. The network can be that of any of the wireless communication technologies like GSM, CDMA, wireless local loop, Wi-Fi, WiMAX or other wide area network (WAN) techn...

The invention relates to cellular telephone systems in which a mobile unit communicates by wireless communication to a base station connected to the wire telephone network and more...

The Backbone of Wireless Networks A base station connects your phone to the network. It acts as a hub between mobile devices and the core ...

Mobile communication base station is a form of radio station, which refers to a radio transceiver station that transmits information between mobile ...

What is a Base Station? A base station is a fixed transceiver that serves as the central communication point for mobile devices within a defined geographical area, known as a cell. It is ...

A base station, abbreviated BS, is an important component of the radio access network in mobile telecommunications. Its main functions are ...

A base station is an integral component of wireless communication networks, serving as a central point that manages the transmission and ...

A base station is a fixed point that enables wireless communication between mobile devices and the network. These stations consist of radio transceivers, antennas, ...

Mobile communication system base station

A mobile base station, also called a base transceiver station (BTS), is a fixed radio transceiver in any mobile communication network or wide area network (WAN).
