The intermittency, randomness and volatility of wind power and photovoltaic power generation bring trouble to power system planning. The capacity configuration.

In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generation ...

This article addresses the complementary capacity planning of a wind-solar-thermal-storage hybrid power generation system under the coupling ...

Future research will focus on stochastic modeling and incorporating energy storage systems. This paper proposes constructing a multi-energy complementary power generation system ...

This paper considers the complementary capacity planning of a wind-solar-thermal-storage hybrid power generation system under the coupling of electricity and carbon cost markets.

To address this challenge, mitigating the impact of the intermittency and volatility of wind and solar energy is essential. In this context, this paper employs scenario analysis to examine the ...

Firstly, a comprehensive energy system architecture for wind solar storage and charging was constructed, and its operational characteristics were ...

The authors concluded that combining wind and solar power in many places results in a smoother power supply, which is crucial for the operability and safety of power grids worldwide.

Planning and design of wind-solar complementary power generation for Duodoma communication base station

This paper proposes constructing a multi-energy complementary power generation system integrating hydropower, wind, and solar energy. Considering capacity configuration and optimization of the ...
