By partnering with neighbouring countries, like Latvia and Poland, Lithuania could temporarily store CO2 offshore, creating a network for regional decarbonization efforts.

Lithuania expects to reach its national target under the Effort-sharing Regulation (ESR) to reduce emissions in 2030 by 21 % below 2005 levels, despite exceeding annual emissions allocations in ...

Explore carbon removal policy in Lithuania. Track strategies, funding, and how CDR is emerging in national climate policy frameworks.

Lithuania undertook the target to reduce its greenhouse gas (hereinafter - GHG) emissions by 8% below the 1990 level during Kyoto Protocol's first commitment period 2008-2012.

It's critical for Lithuania to revitalize and increase its low-carbon electricity generation to not only surpass past levels but also to accelerate green energy adoption in the coming years.

Discover how Lithuania is tackling climate change through innovative governmental policies, public engagement, and a commitment to ...

To reduce emissions and achieve increasing prosperity at the same time, we have to decouple economic growth from CO2 emissions. Several countries have achieved this in recent years.

Following the EU's lead on energy and climate policy, Lithuania has adopted national climate change mitigation targets, declaring its ambition to reduce GHG emissions by 50 % in the ...

Lithuania is highly dependent on energy imports and its gross GHG emissions have hardly declined since 2000, despite significant decoupling from GDP growth. Accelerating the green transition will be ...

Lithuania's intermediate and long-term climate commitments essentially are composed of the 70% greenhouse
