This article defines the scope, boundaries, and requirements for solar array circuitry, inverter equipment, and control devices in residential and commercial installations.

In case multiple power sources are to be interconnected, each added power source (inverter in PV case) must have a dedicated circuit breaker or fused disconnect unless their outputs are first combined at a ...

It depends on if that subpanel has a mix of sources and loads, or if that subpanel is dedicated to combining the outputs of the inverters. If it is a mix of sources and loads, then yes, you ...
