Our analyses allow us to understand patterns in renewable energy development in the mostly rapidly changing regions of the Mojave Desert.

From 2011-2018, we collected data on Eastern Box Turtle movement and occupancy in a 79-ha solar farm. The solar farm is divided into six fenced areas, each containing wildlife openings ...

Through a science-based assessment, Conservancy scientists identified enough suitable, already-disturbed land in the Mojave Desert to meet California's ...

Our current campaign is to raise funds for a solar array to power the hawksbill research facility at the Estero Padre Ramos Nature Reserve in Nicaragua. This is one of two major hawksbills nesting sites, ...

What was once the largest solar power plant of its type in the world appears headed for closure just 11 years after opening.

Research is needed to identify the most effective mitigation tools for the desert tortoise as well as aid its recovery and streamline future permitting for renewable energy development.

This summary reviews publicly available information about the adverse impacts and potential benefits of ground-mounted large scale - PV solar power on wildlife in North America, and the status of our ...

Can desert tortoises thrive in engineered habitats? A synthesis of solar energy construction methods,

Solar farms are becoming a common sight in Southern Nevada. More than 18,000 acres of desert tortoise habitat have been replaced by utility ...
