The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and ...

Each presentation focuses on global and U.S. supply and demand, module and system price, investment trends and business models, and updates ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Stay updated on solar energy trends, from PV tech and manufacturing to solar farms and carbon reduction. Explore the latest in commercial solar power.

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax ...

Nearly 50 GWdc are expected to come online in 2025, and almost 44 GWdc in 2026; then, annual installations will stabilize around 38-39 GWdc annually from 2027 to 2030. However, the ...

In 2024, between 554 GWdc and 602 GWdc of PV were added globally, bringing the cumulative installed capacity to 2.2 TWdc. China continued to dominate the global market, ...

On the good side, solar continued its run of astonishing growth, generating 35 percent more power than a year earlier and surpassing hydroelectric power for the first time.

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects ...
