Find up-to-date statistics and facts on the global solar photovoltaic industry.

In this article, with the help of charts and key statistical data, we reveal the latest solar power statistics that demonstrate how the industry has ...

As of 2023, solar energy was the world's third-largest renewable energy technology, behind wind and hydropower -- nearly 5.5% of global ...

On the good side, solar continued its run of astonishing growth, generating 35 percent more power than a year earlier and surpassing hydroelectric power for the first time.

Despite the changing market and policy conditions that the solar industry has faced this year, solar will remain the dominant power source added to the grid in the next five years.

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2025, utility-scale ...

Electricity generation from solar, measured in terawatt-hours.

Globally, hundreds of millions of people are benefiting from solar energy, either directly through on-grid or off-grid installations, or indirectly through grid systems supplemented by solar ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the ...
