-----

Learn about its unique physical and chemical properties, how it's used in various industries, and the safety precautions needed for handling. This comprehensive guide covers everything you need to ...

Strontium is a chemical element; it has symbol Sr and atomic number 38. An alkaline earth metal, it is a soft silver-white yellowish metallic element that is highly chemically reactive. The metal forms a dark ...

Pure strontium is a hard, white-colored metal, but this form is not found in the environment. Rather, strontium is usually found in nature in the form of minerals. Strontium can form a variety of ...

Strontium is a Group 2 Alkaline earth metal. It usually exists as a divalent ion, Sr<sup>2+</sup>, in its compounds. Strontium's chemistry is very similar to that of calcium, which sits above it in Group 2. Strontium is ...

strontium (Sr), chemical element, one of the alkaline-earth metals of Group 2 (IIa) of the periodic table. It is used as an ingredient in red signal flares and phosphors and is the principal health hazard in ...

Strontium is found mainly in the minerals celestite and strontianite. China is now the leading producer of strontium. Strontium metal can be prepared by electrolysis of the molten strontium chloride and ...

Strontium is physically and chemically similar to calcium. Most strontium in the body comes from drinking water and food. Several different forms of strontium are used as medicine.

Strontium is a silvery-white, shiny metal. When exposed to air, it combines with oxygen to form a thin film of strontium oxide (SrO). The film gives the metal a yellowish color. Strontium has a melting point ...

Strontium (pronunciation: STRON-she-em) is a soft, silvery element that belongs to the family of alkali earth metals and is represented by the chemical symbol Sr [1, 2].
