The suspension cable structure with a small rise-span ratio (less than $1/30$) is adopted in the flexible photovoltaic support, and it has strong geometric nonlinearity.

Abstract: The suspension cable structure with a small rise-span ratio (less than $1/30$) is adopted in the flexible photovoltaic support, and it has strong geometric nonlinearity.

In solar power technology, flexible cable-supported photovoltaic (PV) systems (FCSPSs) have become a viable alternative to conventional ground-mounted PV supports. These systems ...

Abstract The flexible support photovoltaic module structure system has advantages such as large span, fast construction speed, and suitability for complex environments. However, this kind ...

In this paper, the mechanical behavior of a single-cable structure is introduced, and the simplified analytical formulations for internal force and displacement are deduced based on the ...

In this paper, a new type of cable-truss support photovoltaic module structure system with excellent wind resistance is proposed. Firstly, the superiority of the new system is proved by the...

A photovoltaic system having a cable or cable bundle, includes at least one photovoltaic module.

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

Fixed supports (rigid structures) and flexible supports (tensioned cable systems) are two main methods used in constructing photovoltaic power ...
