The share of wind and solar grew again in 2024 (+1.5 pp) to 15%. In 2024, global renewable installation reached new records, with over 450 GW of new solar capacity and over 110 GW of new wind capacity.

Newsletter The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 ...

Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal ...

A review by the SUN DAY Campaign of data just released by the US Energy Information Administration (EIA) reveals that the mix of renewable energy sources provided nearly 26% of US ...

This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

A review by the SUN DAY Campaign of data released by the Federal Energy Regulatory Commission (FERC) reveals that the combination of solar ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more ...

Globally, wind-and-solar now accounts for over 15% of electricity consumption, highlighting the growing reliance on low-carbon technology. Particularly in the US, there are pioneering states where this ...

The proportion of wind power and photovoltaic power generation

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. ...
