Lessons Learned from Iran

Looking Forward

Kazakhstan's current energy grid was developed during the Soviet Union and is heavily reliant on its interior coal, gas, and oil resources. Following independence, economic crises prevented the country from investing in the maintenance and development of the grid. Today, this dereliction manifests as low efficiency with the average 1000MW coal plan...See more on green-bri

Both concentrated solar thermal and solar photovoltaic (PV) have potential. There is a 2 MW solar PV plant near Almaty and six solar PV plants are currently under construction in the Zhambyl province of s...

With 3,000+ hours of annual sunshine but unreliable grids in mining regions, Kazakhstan needs off-grid solar solutions fast. Mobile units - prewired 20-100kW systems on shipping containers - solve this.

Needs are great in the power generation market as Kazakhstan seeks to replace aging plants and equipment. Approximately 65% of equipment in power generating facilities has been in ...

Designed for rapid deployment and all-terrain applications, this self-contained solar system delivers reliable off-grid power to areas where conventional infrastructure is limited, ...

Our journey spanned several thousand kilometres and took us to a number of wind and solar farms in the south, centre, and ...

Explore the benefits and technology behind containerized off-grid solar storage systems. Learn how these scalable, cost-efficient solutions provide ...

With the combined efforts of the Sino-Kazakh team, the Kaskelen photovoltaic power station was successfully connected to the grid and ...
