Water turbine is used to convert energy contained in water, potential energy or kinetic energy, into mechanical or electrical energy. There are two types of water turbine, the reaction water turbine and ...

There are two main categories of hydro turbines: impulse and reaction, as described above. The type of hydropower turbine selected for a project is based on the height of standing water--referred to as ...

This guide explains all you need to know about water turbines. Find out about the different types, characteristics, and applications of water turbines.

Different types of turbines are developed to extract mechanical energy from hydraulic energy to generate electricity. There are several ways to ...

Learn about the 10 types of water turbines used for efficient hydroelectric power generation, each suited to specific hydraulic conditions. The article explains the features, applications ...

Impulse and Reaction Turbines
Impulse Turbine
Reaction Turbine
Types of Water Turbines
Founeyron Turbine
Francis Turbine
Kaplan Turbine
Pelton Turbine
Turgo Turbine
Crossflow Water Turbines
Impulse and reaction turbines are further divided into specific types of turbines. The type of turbine selected for a given application depends primarily on the flow and head. The following subsections discuss each type. See more on electricalacademia
