`$ = function() { alert("I am in the $ function"); }` JQuery is a very famous JavaScript library and they have decided to put their entire framework inside a function named `jQuery`. To make it easier for people to ...

The difference is that `functionOne` is a function expression and so only defined when that line is reached, whereas `functionTwo` is a function declaration and is defined as soon as its ...

About `__func__`: "The identifier `__func__` is implicitly declared by the translator as if, immediately following the opening brace of each function definition, the declaration: `static const char ...`

A function is outside the namespace of the rest of the program. It is like a separate program that can have the same variable names as used in the calling program, and whatever it does to them does ...

The function count can keep the variables that were defined outside of it. This is called a closure. It's also used a lot in JavaScript.

509 It's all about variable scoping. Variables declared in the self executing function are, by default, only available to code within the self executing function. This allows code to be written without concern of ...

`(function(doc){ doc.location = "/"; })(document);`//This is passed into the function above As for the other questions about the plugins: Type 1: This is not a actually a plugin, it's an object passed ...

`(function(){})()`; Lastly, `!` makes the expression return a boolean based on the return value of the function. Usually, an immediately invoked function expression (IIFE) doesn't explicitly return ...

12 The `function*` type looks like it acts as a generator function for processes that can be iterated. C# has a feature like this using `"yield return"`; see 1 and see 2 Essentially this returns each ...
