Most early developments in wind-based electrical generation were focused on small-scale power generation for individuals and were generally only ...

Without coming near to breaking the dominance of hydro and coal, electricity-generating wind turbines were sporadically built throughout the following century.

Using an Original Institutional Economics (OIE) approach to examine real world developments, we argue that the global wind energy industry is increasingly volatile and ...

But more recent findings indicate that the world's first functioning wind generator was installed, earlier than assumed, by the Austrian engineer Josef ...

The Wind Turbine Verification Program, established in 1993, introduced electric utilities to emerging wind turbine technologies, created more confidence in wind power, and helped wind energy become the ...

A comparison analysis shows a correlation between total power generation and the share of wind power generation in the total generation mix, and the scenarios with high wind power generation shares are ...

Wind is a growing source of reliable and clean energy around the world and a crucial part of the journey to net zero. But when did people first start to harness the power of the wind?

Follow the history of wind from windmills to modern day wind turbine generators. Information covering ancient wind power history to present day wind technology.

People used wind energy to propel boats along the Nile River as early as 5,000 BC. By 200 BC, simple wind-powered water pumps were used in China, and windmills with woven-reed ...
