OverviewInstallationHistoryFuture developmentEconomicsOffshore wind resourcesPlanning and permittingLegal frameworkSpecialized jackup rigs (wind turbine installation vessels) are used to install foundation and turbine. As of 2019 the next generation of vessels are being built, capable of lifting 3-5,000 tons to 160 metres (520 ft). The large components can be difficult to install, and gyroscopes can improve handling precision. Dynamic positioning has also been used to keep the vibrating pile driver steady when installing foundations.

In essence, floating wind farms consist of wind turbines mounted on floating structures secured by moorings and anchors, which are essential for maintaining their position against wind forces.
